<u>Abstract</u>

<u>Final Year Project</u>

<u>**Project Title**</u>: Develop a website for college students which provides previous year notes.

A helpful resource for improving college students' academic performance is the creation of a website that offers notes from prior years. This website aims to provide students with a convenient and centralised platform where they can access notes from previous years, allowing them to more effectively review and study. As the need of notes for college student will upload by the pass out student in the website. This website offers a platform for students to access course materials, notes, and other relevant resources that can aid in their learning process. The website is designed to provide a user-friendly interface, making it easy for students to navigate and locate the notes they need. Finding specific notes is easier and more quickly done when students can search for them based on their needs.

The website offers notes from previous years, which can be sorted by subject, course, or year, providing students with an extensive library of resources to choose from. The notes are uploaded by fellow students, professors, or academic professionals, ensuring the quality and relevance of the materials. The website helps to lighten the load of carrying textbooks and notes, which is one of its advantages. Students can access their notes from any device, including laptops, tablets, and smartphones, giving them access to their notes whenever and wherever they want. The platform's layout and design put an emphasis on user friendliness, simplicity, and easy navigation so that students can easily find the notes they need.

We will be using HTML, CSS for frontend for the website interface and implementing our project. ReactJs is huge open-source framework for website making it has node package manager(npm) which handles all package management. Also use the programming language like JavaScript. For backend we will use Nodejs framework and storing data we will use the MongoDB database.

In conclusion, the creation of a website for college students that offers notes from prior years is a creative solution that improves the learning process. The website streamlines studying, promotes student collaboration, and makes it possible to access a massive body of knowledge by offering a central location for notes.
